

GAP-251R - G7 Series

2U RUGGED WORKSTATION

Intel® Xeon® E-2200/2100, Intel® 8th/9th Gen. Core™ i3 - Coffee Lake
Rear I/O - Rear Power Supply

GAP is a line of rugged servers and workstations with aluminum construction, designed for applications that require a robust and qualified MIL-GRADE device, suitable for operating in critical environments.

GAP-251R G7 series workstations feature single socket Intel® Xeon® E-2200/2100 or Intel® 8th/9th Gen. Core™ i3 (Coffee Lake) processors supporting up to 8 Cores (16 thread with Hyper-Threading), 16MB Smart Cache, up to 128GB DDR4 memory with or without ECC and up to 16 PCIe 3.0 lanes. The integrated IPMI services support monitoring, control, and management functions and provides for alarm notifications in case of critical events.

GAP-251R is designed for 19" rackmounting and has a 2U chassis with 510mm depth.

The rear I/O and rear power supply layout includes twelve removable SSD and an optional slim DVD.

GAP-251R rugged workstation can host one low profile PCIe cards and two PCIe cards.

The additional boards are equipped with dedicated fixing systems to ensure optimal operation even in the presence of shock and vibration or during transport.

GAP workstations are qualified according to MIL-STD-810G for temperature, shock and vibration and can optionally conform to MIL-STD-461 for EMI /EMC. Upon request, the integrated devices, complete with I / O cards, can be subjected to specific profiles of thermal or mechanical stress. Versions with MIL grade connectors on I/O ports and power input are available.

All units are delivered with their inventory list to ensure configuration control and reproducibility over time.
